

Hi GaYt,

We're writing to remind you that starting **June 20, 2024** the legacy Firebase Cloud Messaging (FCM) APIs will be discontinued.

What do you need to know?

On **June 20, 2024**, we're reducing the number of Firebase Cloud Messaging (FCM) legacy register APIs and legacy send APIs that provide similar functionality. This step will allow us to provide you with a more consistent experience and align with Google security standards to improve security, reliability and performance.

Because of these API decommissions, some already-deprecated SDKs and features will stop working after **June 20, 2024**.

Please consult the tables below to find which Firebase Cloud Messaging (FCM) APIs and corresponding services/SDKs/features will be discontinued and replaced with new alternatives.

Discontinued Send API	Decommissioned service	New alternative
Legacy HTTP Protocol	Sending messages via the Legacy HTTP API.	Send messages via the HTTP v1 API.
XMPP Protocol	Sending upstream and downstream messages via the XMPP API.	Send downstream messages via the HTTP v1 API. Send upstream messages via HTTP/ gRPC directly from the App to your server.
Batch send API	Including multiple send requests in a single HTTP request to FCM known as Batch Send.	Send messages via the HTTP v1 API, which has been optimized for fanout performance

Discontinued Register API	Decommissioned SDK	New alternative
---------------------------	--------------------	-----------------

GCM register API	Google Cloud Messaging(GCM) SDKs (deprecated in 2018).	Latest FCM Android SDK.
Legacy Web register API	FCM JS SDK version<7.0.0 (deprecated in 2019)	Latest FCM JS SDK.
Instance ID Server API for Web	No SDK related to this API.	Latest FCM JS SDK.

Discontinued Feature	Decommissioned service	New alternative
Server keys	Authenticating requests with server keys.	Authenticate requests with access tokens generated from authorized service accounts
iOS Direct Channel	Sending messages via FCM's direct channel to iOS devices while they are running in the foreground.	All iOS messages will be sent via APNS channel.

What do you need to do?

Take the following actions before **June 20, 2024**, to ensure that you have access to the latest supported features and to reduce the risk of future decommissions affecting your usage:

- Follow the instructions described in [Firebase FAQ](#) to migrate your individual APIs.
- Update to the latest versions of Firebase SDKs.

Platform	Recommended FCM SDK version
Android	>= 23.1.2
iOS	>= 10.10.0
Web (Javascript)	>= 9.22.1

Your Firebase project(s) that use Firebase Cloud Messaging APIs are listed below:

- [SBHK-Admin \(1092360795370\)](#)
 - Your recent usage of impacted APIs/features: Legacy HTTP protocol
 - Your recent usage of impacted APIs/features: Legacy Web SDK
 - Your recent usage of impacted APIs/features: Server Keys
- [SBHK-Client \(77123011028\)](#)
 - Your recent usage of impacted APIs/features: Legacy Web SDK

- *Your recent usage of impacted APIs/features: Legacy HTTP protocol*
- *Your recent usage of impacted APIs/features: Server Keys*

We're here to help

If you have any questions, please review the [Firebase FAQs](#).

Thanks,

Todd on behalf of the Firebase team

Was this information helpful?

You have received this mandatory service announcement to update you about important changes to Firebase or your account.

Full Requirements Specification

1. Client's Functions

- 1.1 A guest or member can direct to Chatroom
- 1.2 One time chat only. Client cannot trace back the chat history
- 1.3 Open or close notification for each incoming message
- 1.4 End chat (with button / browser closed)
- 1.5 Message supports Text, Emjoi, Sticker, Photo, Video
- 1.6 Direct message reply function
- 1.7 Have a function to reply a specific message
- 1.7 Can't copy content by client
- 1.8 Have personal setting if a member

2. Volunteer's Functions

- 2.1 Message functions the same as Client's with additional:
 - Can't copy content by volunteers
 - Only can view own chats's history, forbidden to view other chats
- 2.2 Have the limitation on how many volunteer can handle different ongoing chats
- 2.3 Personal account management
- 2.4 Can schedule duty

3. Admin's Functions

- 3.1 Message functions the same as Client's & Volunteer's with additional:
 - Can view all chats' history
 - Can monitor all current chats, including volunteer online.
 - Can take control all chats immediately
- 3.4 Can import a volunteer list to create accounts
- 3.5 Report functions for performance analysis and optimization
- 3.6 System accounts management including volunteers and admins
- 3.7 Can select the limitation on how many volunteer can handle different ongoing chats
- 3.8 Clairvoyance function for monitoring typing information
- 3.9 User questionnaire is auto sent to a client when the chat ends or Admin / Volunteer requests manually to the client

4. User Interface (UI)

- 4.1 Language: Chinese & English
- 4.2 Accessibility
- 4.3 The UI should be responsive and adapt to various screen sizes and devices
- 4.4 Organization Information Page
- 4.5 Hotline Page: One touch to dial - Hotline: 2389 2222

5. Security & Privacy

- 5.1 Require volunteers and admin to have Multi Factor Authentication
- 5.2 Security Policy such as Strong password policy
- 5.3 Forget password function
- 5.4 Multi Factor Authentication Backup Code function

6. ADDITIONAL: Futures

Note that this is an additional and non-mandatory component designed to prepare for future requirements.

- 6.1 APIs for connecting with other business tools and platforms
 - Such as volunteers' duty schedule (with another Internal System & Google Calendar)
